

Harmoni 3.0 + Generative AI. The best of both worlds.

Imagine having access to a tool that combines 35 years of refinement and innovation in analyzing market research data with the power of generative AI. We call this tool ChatHarmoni, and it's available right now in Harmoni 3.

ChatHarmoni is an infinitely knowledgeable, expert research companion that you can bounce ideas off as you seek to ponder and solve research challenges. ChatHarmoni works with you to generate draft AI summaries of analyses within Harmoni story views (single charts, tables, record views, or verbatims).

Use the principles of prompt engineering you've learnt on other platforms to engage with ChatHarmoni as it becomes your trusted assistant. ChatHarmoni will provide initial observations that then act as a springboard for the curious to dive deeper, ask additional questions, and generate new levels of understanding.

Harmoni 3 is a completely re-engineered, cloud-based platform, purpose-built for market research data. Explore survey data through both AI and human prompts. It's a true data-to-understanding tool that gets more value out of market research data.

Harmoni user roles

Competitive advantages in a customer-centric world come from deep insights into what consumers think and how they act. Achieving this in a timely manner requires market research data at your fingertips.

Harmoni is designed to cater for different types of users – everyone from insights professionals to data gurus to frontline decision-makers. We've lined up the features and functionality with what each type of user needs to help them be more effective, efficient and successful in their roles.

Harmoni Viewer

For those who use data to measure progress, assess growth, understand market position, and evaluate the competition. Viewers turn the insights discovered by others into meaningful action – and this is where the true value in your data culminates and is revealed.

Typical users: Client stakeholders

Harmoni Explorer

For people who use data every day to support better understanding. Explorers go beyond standard reports to find answers to specific questions as they arise. With sufficient training, Explorers thoroughly analyze the data and build specific, customized analyses and visualizations.

Typical users: Corporate researchers

Harmoni Creator

For true data experts with a deep understanding of how to process, integrate, and organize raw data. Producing and defining parameters of projects, Creators bring clarity and efficiency into complex reporting environments, so organizations can uncover meaningful insights and make better decisions.

Typical users: Infotools' ops team

Expert implementation, insights services, & support

Our expert insights services team have proven experience in delivering long-term value, with multiple 10+ year relationships with some of the world's most renowned brands. Through our professional services, support, and software, we collaboratively enable organizations to be truly data-driven and act on deeper insights with greater confidence.
